

Tuesday 1st December

WALT: understand the basic function of the ear and how it works so we can hear

How do we hear? Number the statements in the correct order...	Statement
	The vibrations pass along the auditory nerve to your brain.
	The ear-drum vibrates when a sound hits it.
	Your brain sorts the message and you hear the sound.
	Your outer ear channels the sound waves into your ear.
	The vibrating ear-drum makes the little bones in your ear vibrate.
	The sound waves travel along the auditory canal.

The \_\_\_\_\_ is used for hearing. It is split into 3 sections:

1) \_\_\_\_\_

2) \_\_\_\_\_

3) \_\_\_\_\_

\_\_\_\_\_ waves travel from the outer ear to the \_\_\_\_\_ ear and are then transmitted to the inner ear.

The compressional waves are then sent from the inner ear to the \_\_\_\_\_.
