## Teeth

### Human Teeth and Their Functions

Some people have wisdom teeth but they have no function now.

To help prevent tooth decay:

- limit sugar food and drink;
- brush teeth twice daily using a fluoride toothpaste;
- visit your dentist regularly.

## Scientific Vocabulary Digestive System

1	Digest	Break down food so it can be used by the body.
2	Oesophagus	A muscular tube which moves food from the mouth to the stomach.
3	Stomach	An organ in the digestive system where food is broken down with stomach acid and by being churned around.
4	Large intestine	Part of the intestine where water is absorbed from remaining waste food. Stools are formed in the large intestine.
5	Small intestine	Part of the intestine where nutrients are absorbed into the body.
6	Rectum	Part of the digestive system where stools are stored before leaving the body through the anus.

## The Human Skeleton

Skeletons have three main functions:

- Movement
- Support
- Protection

There are 206 bones in the human skeleton. The hand is the part of the body with the most bones. The ear is the part of the body with the smallest bones. Bones are connected to each other by ligaments to form joints. They are moved using muscles which are attached to the bones by tendons.
